Optional:
fertilization
spraying

CultiMAX
CULTIVATOR

CultiMAX
8 gangs pull type

Sugar cane cultivator

CultiMAX is the most efficient and essential tool for any sugarcane grower worldwide.It serves multiple purposes, working two interrows (tracks) per pass.
In one of its functions, it ridges soil toward the row and forms raised beds using disc gangs all oriented toward the row.
In another function (with discs in alternating positions), it works the track by aerating the soil, mixing residues, improving water infiltration, and performing shallow weeding.
Suitable for any mechanized system from 1500 to 1900 mm, as each disc gang is adjustable in width and row spacing (with lateral, angular, and oscillating movement).

CultiMAX - 4 gangs
A compact pull-type or 3-point hitch unit, agile in tight headlands.
It is an extremely fast, compact unit ideal for working in narrow headlands due to its reduced length. Each 135 kg gang ensures deep penetration.

CultiMAX – 8 Gangs
A heavy-duty, pull-type unit that works each track twice per pass.
With an overall length of 3.90 meters (including the drawbar) and weighing 2000 kg, it ensures excellent penetration in residue-covered and weedy soils, working each track twice using 4 gangs of 2 discs each (for a total of 16 discs), saving both time and fuel.

Optional Fertilization / Spraying Systems
Sugarcane fertilizing system with a 600 kg hopper, hydraulic motor, and regulator (optional 1000 kg stainless steel hopper).Spraying system with a 600-liter plastic tank, hydraulic motor, and regulator.

Model	Gangs	Number of discs	Working width	Power HP	Discs	Disc axle
1224L	4 three points	12	2,20	60	24" x 5mm	38,1 mm
1226L	4 three points	12	2,20	70	26" x 6mm	42 mm
1226	4 pull type	12	2,20	85	26" x 6mm	42 mm
1626	8 pull type	16	2,20	100/120	26" x 6mm	42 mm
